

# Setting breeding objectives

Understand the playing field

Understand your business (farming operation) and industry

Understand what is within your control

Understand the interaction of the factors outside of your control

Important  
considerations-  
Breeding  
requires a long-  
term approach

- **What are you aiming at ?  
Always have the end user in  
mind.**
- **Am I sufficiently  
diversified?**
- **What alternatives do I have  
in my strategy?**

# What influences my success?

- Farming for profit – not turnover
- Long term sustainability
- Be practical, realistic and in touch

# 4 Basic steps

Benchmark current performance

Evaluate critical traits and decide which to:

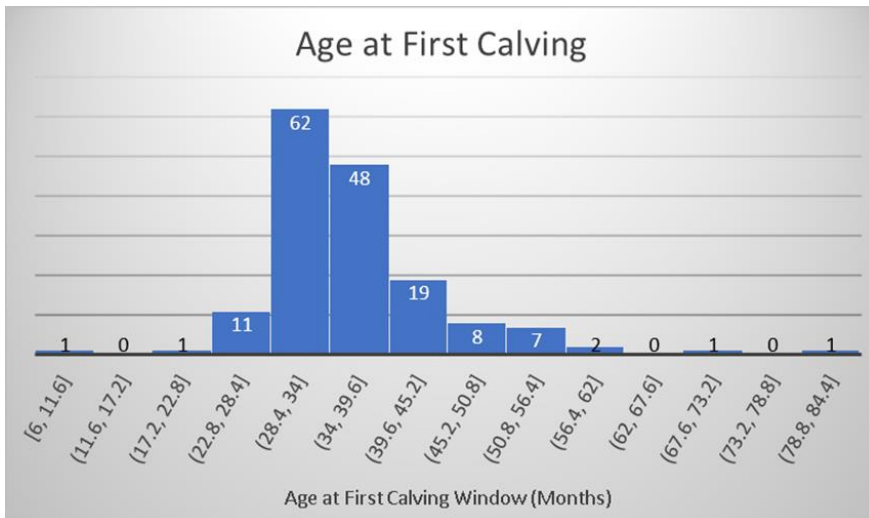

- Maintain
- Accelerate

Establish breeding objectives and goals

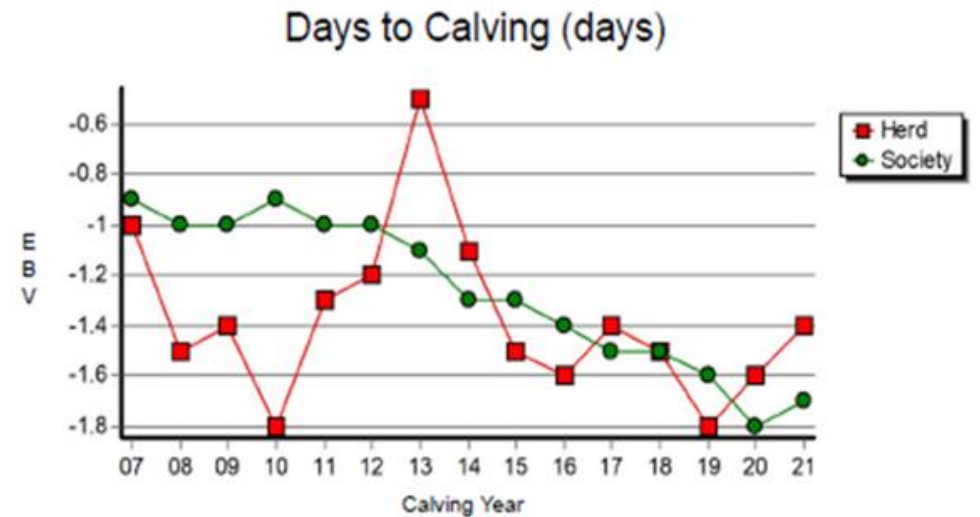

Manage your breeding plan  
(Always linked to a time-line)

# How to benchmark yourself

- **Reproduction – crucial**
  - Average conception % in 63 day mating season
  - % conceived in first 21 days
  - **AFC**

- **Status of EBV's**
  - Days to Calving
  - Scrotal Circumference
  - Rib fat

# Weaning percentage

- Calves born alive: Calves weaned
- Assisted births
  - Among first calvers
  - Among cows
- Calving spread
- EBV's
  - BW
  - CED
  - CEDtrs
  - GL

# Milk production (and mothering ability)

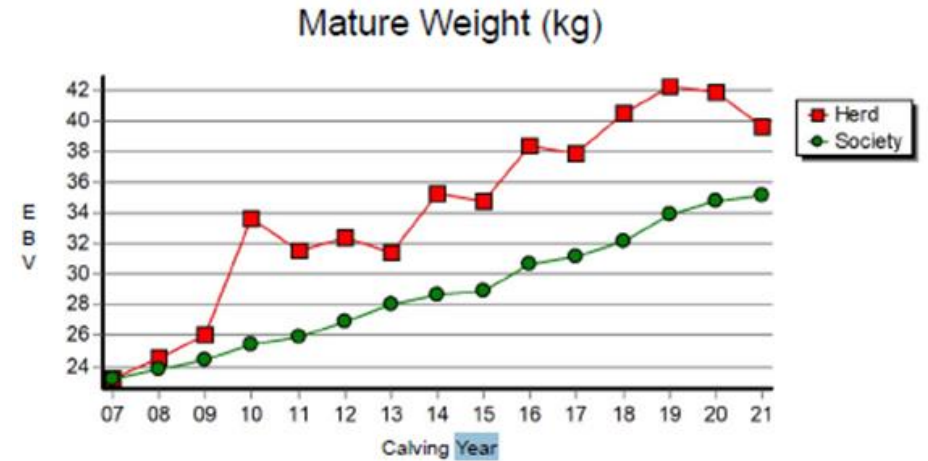

---

- Easy suckling calves
- Strong unassisted – extensive conditions
- Weaning weights
- EBV's
  - Milk
    - BCS
    - Re-conception

# Cow size

- Focused on efficiency
  - Cow size
    - Hip height
    - Weight
    - Production efficiency
  - Longevity
    - Udder and teats
    - Legs hooves
    - Teeth
- EBV's
  - 600 Days
  - MCW

# Production traits

- **Growth**
  - **200d**
    - **Weaning weight of calves (Cow : calf ratio)**
    - **Biomass of breeding herd: Biomass weaned**
      - **NB: Breeding herd – includes sub-adults to be incorporated in breeding herd**
  - **400d**
    - **Growth until 400 days**

# Beef production system

- Oxen or feedlot
  - Age of turn-off
  - Weight
  - Fattening score
  - Conformation – Dress out %
  - Beef Yield
- Carcass quality
- Meat quality
- EBV's:
  - CW
  - EMA
  - RBY
  - Rib & rump fat
  - Marbling

# Single trait selection too challenging

Antagonists

Solution:

- **Selection indexes**

# Grassfed Index

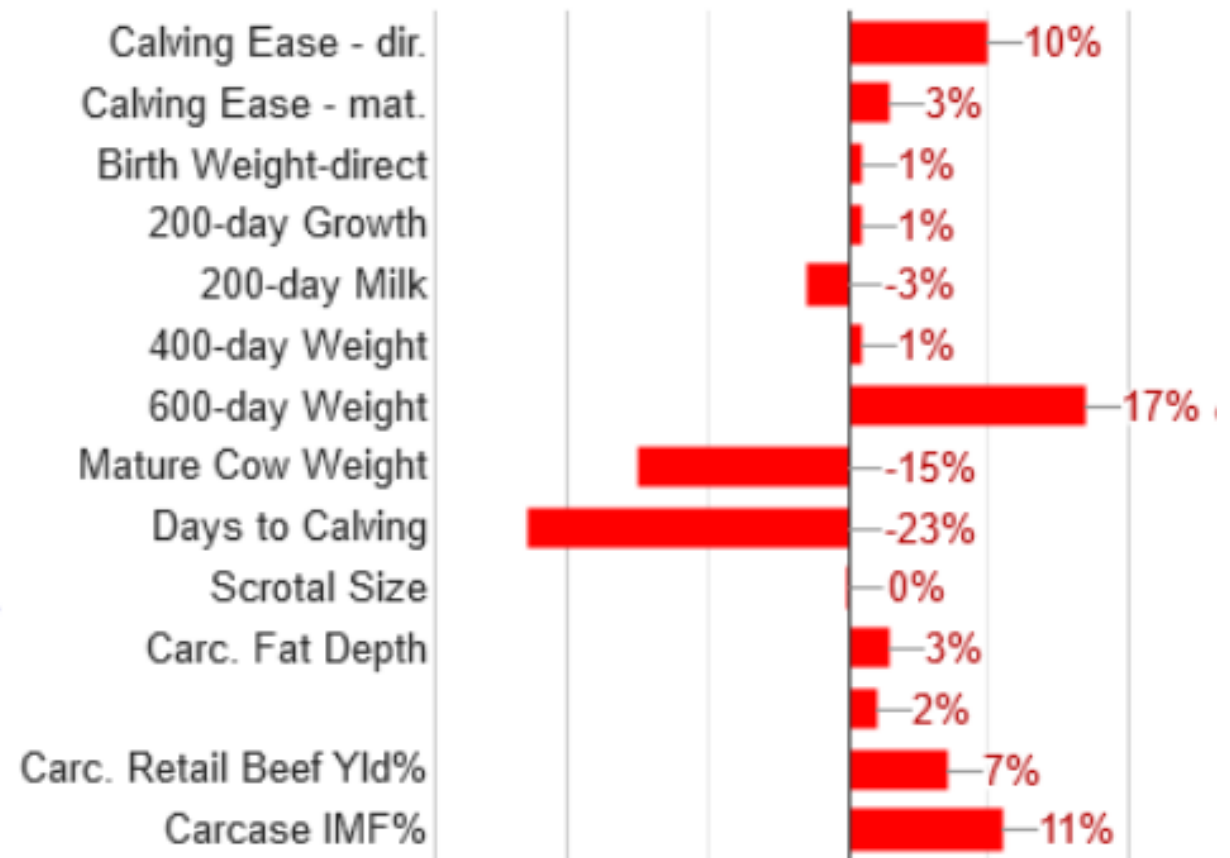

- Estimates the genetic differences between animals in net profitability per cow joined for a herd that keeps replacement females and requires a moderate emphasis on calving ease. Progeny age at turn off is 23 months off pasture. Steers are around 500kg liveweight (260kg carcass). Emphasis was placed on carcass quality.
- Traits of economic importance / relevance.
- Combination of EBV's required (contributing) for profit.
- Expected change (response) in the herd if a top 10 % bull is used.

# Economic consideration and EBV's driving it

## Economical considerations

## EBV's driving profit

# Response graph

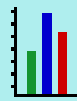

# EBV's vs Rand Index Values

# EBV's vs Rand Index Values

Selection Index Values (Rand)		
Market Target	Index Value	Breed Average
Self Replacing Feedlot Index (R)	+R 643	+R 364
Self Replacing Grassfed Index (R)	<b>+R 314</b>	<b>+R 207</b>
Self Replacing Weaner Index (R)	+R 460	+R 218

# In Summary

- Determine your goals – End user in mind!
- Benchmark yourself.
- Manage what you can control.
- Be focused:
  - Outcome driven
  - Measure progress
  - Manage obstacles and challenges
- Value of Indexes vs EBV's.
